National Renewable Energy
Laboratory

Frank Tugwell, President,
Winrock International

Carl Weinberg, Weinberg
Associates

R. James Woolsey,
Vice President, Booz Allen
& Hamilton, Inc.

SAVE THE DATE

December 6-7, 2004

“Renewable Energy in America -- Phase II” The Annual Policy Conference of the American Council On Renewable Energy (ACORE) Washington, DC

ACORE requests that you save December 6-7, 2004 for a vitally important conference on the future of renewable energy policy in America.

To be held in conjunction with other leading organizations, the conference will call for a new and bold “Phase II” of developing and deploying renewable energy. This vision recognizes 1973-2003 as Phase I, focused on technology RD&D. Looking ahead, Phase II will focus the nation’s attention and resources on large-scale commercial success of renewable energy.

The conference will call for Phase II, and provide you with a platform for raising key questions and developing the new policy foundations for a vibrant and inspiring new phase of success. Questions like:

- Maximization of the role of biofuels for reducing foreign oil imports and enhancing national security and wellbeing;
- Mobilization of the private sector through stable and permanent features in the tax code and other public policy;
- Translation of America’s technological capability in renewables to deployment around the world, to the benefit of the poor, for sustainable development, and for economic upliftment everywhere.

Conference Chairmen are Roger S. Ballentine and F. Henry (Hank) Habicht, with honorary co-chairs C. Boyden Gray and R. James Woolsey, supported by the ACORE Board of Directors, Advisory Board, Steering Committee and members, plus the collaboration of nonprofit groups, trade associations, companies, agencies, and other organizations that want to see renewable energy emerge as a commercial success in America. Please plan to join us on December 6-7, 2004 in Washington, DC, and watch our web site www.AmericanRenewables.org for additional information.
